

A Fully Integrated Cloud-Based EMR and Practice Management Software Solution for Surgery Centers

WEBDoctor understands that surgery centers require more than just a standardized EMR and practice management solution. We have collaborated with physicians in order to provide them with a user-friendly and relevant system unique to the demands of ambulatory surgical centers (ASCs). Our WEB Surgi® Surgical Center EMR is the solution that ASC's want and need.

Integrating WEB Surgi into your surgery center allows for more patients to be seen each day; it meticulously monitors patient operation statuses; it reduces interrelated costs from managing a surgical center; and it ensures complete patient privacy and safety. WEB Surgi is a great tool for ASCs looking to streamline their clinical processes and build efficiency in their front-office administrative staff. From single to multiple facilities, WEB Surgi's scalable system serves all types of centers. Significant cost and quality improvements can be driven throughout surgical centers with WEB Surgi.

Our WEB Surgi system successfully meets the ARRA Meaningful Use criteria. It is a Drummond Group Certified Ambulatory EHR and it is also entirely HIPAA compliant. Additionally, WEB Surgi is an ONC-ATCB certified EMR that supports the Meaningful Use criteria. WEB Surgi strives to not only give you and your center the software to automate patient record documentation, but also provides you with the data storage, data retrieval, and other tools that guarantee fast and complete return on investment.

WEB Surgi Templates

- ▶ Point-and-click
- ▶ Comprehensive anesthesia record
- ▶ PACU discharge summary
- ▶ Initial operation notes
- ▶ Pre-operation & post-operation anesthesia orders & notes
- ▶ Pre-operation & post-operation anesthesia evaluation
- ▶ Surgical histories, past medical histories, & family histories

The screenshot displays several key components of the WEB Surgi interface:

- Surgical History - Female:** A dropdown menu with options like NONE, QuickPick: COMMON Surgeries, Cosmetic Procedures, Organ Removal/Resection, Other Surgeries, Pediatric/Adolescent Surgeries, and Recent procedures (MINOR).
- Add Vital Signs:** A form for entering patient vitals such as Height, Weight, Head Circ, Temperature, Pulse, Respiration, Body Fat, Body Mass Index, O2 SAT %, Ventilation, Et. Blood Loss, ETCO2, Urine Output, and Blood Pressure.
- Anesthesia Supplies/Monitors/Gases Supply List:** A table listing various supplies and monitors like Anesthesia Gases (Air, CO2, Desflurane, Isoflurane, Nitrous Oxide, Oxygen, Sevoflurane), Anesthesia Machine, Anesthesia Breathing Circuit, Anesthesia Face Mask, Capnography (ETCO2), Cardiac Monitor, Endotracheal Tubes, and Epidural Anesthesia Tray.
- Initial Op Notes:** A form for recording initial operation notes, including fields for Date, Surgeon Name, Assistant Name, Anesthesiologist Name, Pre-Op Diagnosis, Post-Op Diagnosis, Specimen Removed, Complications, EBL, Post-Op Condition, Procedure Description, and Treatment Plan.

Features

- ▶ Surgical supply inventory management
- ▶ Anesthesia supply inventory management
- ▶ Surgical center data fields
- ▶ Surgical supply inventory
- ▶ Anesthesia supply inventory
- ▶ Anesthesia records
- ▶ Pre-operation records
- ▶ Post-operation records
- ▶ Discharge records
- ▶ Surgical center vitals
- ▶ Customizable electronic consent forms
- ▶ Integrated appointment scheduling module

Benefits

▶ A turn-key, yet customizable ASC system:

After realizing that all surgery centers share similar requirements and processes, WEBeDoctor engineers went forth with creating a universal system applicable to any type of surgical center. WEBeSurgi's architecture was created so that any surgery center could benefit from its offerings. However, WEBeDoctor also identified that every practice has its own management style. So, we have made sure to provide customization capabilities within WEBeSurgi. This will allow each client to have the best ASC management system that suits their needs.

▶ A secure, cloud-based system:

WEBeSurgi is a cloud-based (or web-based) system that allows for operational statuses and activities to be monitored without physically being in a communications center. WEBeSurgi uses the highest level of security available---128 bit encryption. Information can be restricted at the user level, and multiple users can be on the WEBeSurgi system at the same time. Various mobile devices can access the system concurrently. Additionally, daily data backup is offered throughout the system for centers that would like to locally store their data.

▶ Better tracking and analysis:

By automating your daily duties and logging them into your electronic system, you and your staff will be able to have more visibility and control on your surgical center's management style. With an electronic system that maps out your daily workflows, you and your staff can easily identify problems and create resolutions for them quickly.

▶ Less time spent on administrative processes:

Searching for lost charts is extremely time consuming and can make your administrative workflows inefficient. WEBeSurgi eliminates time lost searching for misplaced charts since documentation is written at the point-of-care and organized electronically right away---allowing you and your staff to focus more time on patient care. Charts, filing, and folders are all eliminated with WEBeSurgi. Now that your patient information is electronic, you and your staff can view this information at the same time---allowing for multiple tasks to be completed at once.

▶ Patient safety and reduction of liability:

Patients and their statuses are monitored from the moment they enter your surgery center. Surgeries are closely tracked through WEBeSurgi's anesthesia records, pre-operation records, post-operation records, and discharge records. These features significantly reduce patient liabilities for your surgery center.

▶ Low cost, high financial gain:

Since WEBeSurgi is cloud-based, the cost for a complete solution is much less expensive than any traditional client/server based software. There is no need for you to invest in expensive servers, data rooms, or IT experts. Eliminating the need for servers or data rooms provides you and your office with not only the opportunity to save capital, but also the opportunity to invest elsewhere. On top of that, you will never have to pay extra for WEBeSurgi updates---everything is included in the purchase cost.
